## **Q4.** Surface Area of Cylinder (10 marks):

Given radius r and height h of a cylinder, the surface area A is given by

$$A = 2\pi rh + 2\pi r^2$$

Assume that  $\pi = 3.14$ 

#### Write a program to

**Input, in sequence,** the radius, r, and height, h, of a cylinder, where both r and h are real numbers in the range of [1, 60].

Output the surface area of the cylinder.

**Note:** The output value must be rounded to two decimal places, and both decimal places must be displayed even if it is 0.

### 试题 4. 圆柱体的表面积 (10 分):

给定一个圆柱体的半径 r 以及高度 h,其表面积 A 为

$$A = 2\pi rh + 2\pi r^2$$

假设  $\pi = 3.14$ 

# 试写一程式以

**依序输入**一个圆柱体的半径r,以及高度h,已知r和h的值是在 [1,60] 区间里的实数。 **输出此**圆柱体的表面积。答案必须近似至两位小数。

注意: 此输出值必须近似至小数点后二位数, 即使为 0, 小数点后二位数也必须显示。

### Example (例子)

Input (输入)	Output (输出)
5 13	565.20
30.3 50.4	15355.92
20.4 16	4663.28
